Cybersecurity Analyst with hands-on experience in Security Operations Center environments, incident investigation, and threat detection across enterprise and cloud infrastructures. Skilled in Linux systems, networking, and cloud security (AWS/Azure). Strong interest in threat detection engineering, incident response, and security automation.

PROFESSIONAL EXPERIENCE

SOC Analyst at Neverhack (20 Jan, 2025 – now)

- Investigate and triage security alerts using multiple **SIEM** and **EDR/XDR** platforms
- Analyze logs from endpoint, network, and cloud systems to identify suspicious activity and IoCs
- Perform incident response activities including investigation, containment, and documentation of incidents
- Participate in **detection engineering** tasks, assisting with development and tuning of detection rules
- Review and improve SOC Standard Operating Procedures (**SOPs**) to enhance incident response workflows
- Support onboarding of new customers and integration of their environments into monitoring platforms
- Prepare weekly and monthly **security reports** including threat analysis and incident metrics

PenTest Intern at Hacktify (15 Feb, 2024 – 15 March, 2024)

- Conducted vulnerability assessments of web applications to identify exploitable security weaknesses
- Tested applications for common vulnerabilities: XSS, SQL/HTML Injection, IDOR, CSRF, SSRF, Clickjacking
- Documented findings and prepared penetration testing reports with remediation recommendations
- Assisted in improving application security posture through vulnerability identification and reporting

EDUCATION

Tallinn University of Technology | 2022–2025
Cyber Security Engineering, Bachelor – *cum laude*

CERTIFICATES

- [GIAC Security Operations Certified \(GSOC\)](#)
- [Security Operations Analyst Associate \(SC-200\)](#)
- [Cisco CCNA](#)
- [Cisco CCNP Enterprise: Core Networking](#)
- [Red Hat System Administration I \(RH124\) & II \(RH134\) 9.0](#)

TECH SKILLS

Security Operations: Incident Response, Threat Intelligence Analysis, Detection Engineering
Endpoint Security / XDR: Microsoft Defender, SentinelOne, Trend Micro
Systems / Infrastructure: Linux, Windows, Docker, Ansible
SIEM / Log Analysis: IBM QRadar, Microsoft Sentinel, Elastic Stack
Monitoring / Observability: Grafana Stack, Prometheus
Programming / Automation: Java, Python, Bash, SQL
Cloud Security: AWS, Azure, Wiz

PROJECT EXPERIENCE

Security Analytics & Threat Investigation Lab – Elastic Stack

Elasticsearch, Kibana, ES/QL, Filebeat, Python, Docker

Built a reproducible **Elastic-based SIEM** and threat investigation environment for ingesting, normalizing, enriching, and correlating security telemetry. Developed Python preprocessing pipelines and Filebeat ingestion for endpoint, network, DNS, process, VPN, breach-exposure, and threat-intelligence datasets.

Implemented **GeoIP/ASN enrichment**, Elasticsearch ingest pipelines and index mappings, and integrated threat-intelligence sources including VirusTotal, AbuseIPDB, and IPinfo.

IaC project (Ansible)

Designed and implemented an Infrastructure as Code (**IaC**) project with a focus on security, high availability (**HA**), and **scalability**. The infrastructure supports a custom application and is configured to meet strict Service Level Agreements (**SLAs**) and include an incident response procedure.

Order Service – Spring Boot Microservice Development

Spring, Docker, Kafka, Grafana Stack

As part of a distributed system, I developed and maintained an Order Service using Spring Boot, focusing on robust order management. This microservice integrates seamlessly with various system components to provide a scalable solution for processing orders.

- Microservices Architecture
- Observability and Monitoring
- Service Discovery and API Gateway
- Security
- Testing Strategy
- Containerization and Deployment

This project exemplifies my ability to design, develop, and maintain scalable microservices with a strong focus on observability, security, and reliability in a cloud-native environment.
